

INLS 641 NYC Airbnb Visualization Project Presentation

Suchi Parekh, Yuan Wen, Cody(Yuxuan) Xu, Rui Hou

Presentation Outline

Conclusion

Live Demo

**Introduction to the data and
research questions**

**Our process to develop
solution design**

Our final design

Research Questions

- Which neighborhoods in NYC are popular for Airbnb service?
Which neighborhood has more available rooms for listing?
- What are the average prices of these neighborhoods?
Which areas are pricier compared to others?
- Which room types are booked more frequently?
Do people have preference for short term or long term stay in NYC?

Tasks

- Price Trends
- Popularity Trends
- Listings Availability

Dataset from Kaggle

<https://www.kaggle.com/dgomonov/new-york-city-airbnb-open-data>

Process to Develop Solution Design

- 
- Raw dataset eg. listing ID, host_name, neighbourhood_group, latitude...
 - Pick up some of the fields, based on our objectives.

Process to Develop Solution Design

Objective 1: Price in all locations

- Fields: *“latitude”, “longitude”, “price”, “room_type”, “neighbourhood_group”*
- Visualization: **Scatter Plot**, color_coded range

Process to Develop Solution Design

Objective 2: Price in five neighborhood areas- Brooklyn, Manhattan, Queens, Staten Island, Bronx

- Fields: “*price*”, “*neighbourhood_group*”
- Visualization: **Violin Plot**: show density and distribution of prices in the five neighborhood groups

- Fields: “*minimum_nights*”, “*id*”
- Visualization: **Histogram**: show number of short term/long term rooms

Process to Develop Solution Design

Objective 3: details for availability and popularity of the 200 neighborhoods

- Fields: “*availability_365*”, “*neighbourhood*”
- Visualization: **Bar Chart**: calculate average available days in a year for every neighborhood; show the number of rooms for every neighborhood.

The visualization of NYC Airbnb

There are 48895 rooms.

Entire Apartment vs. Private Room

Entire Apt: 25409 listings

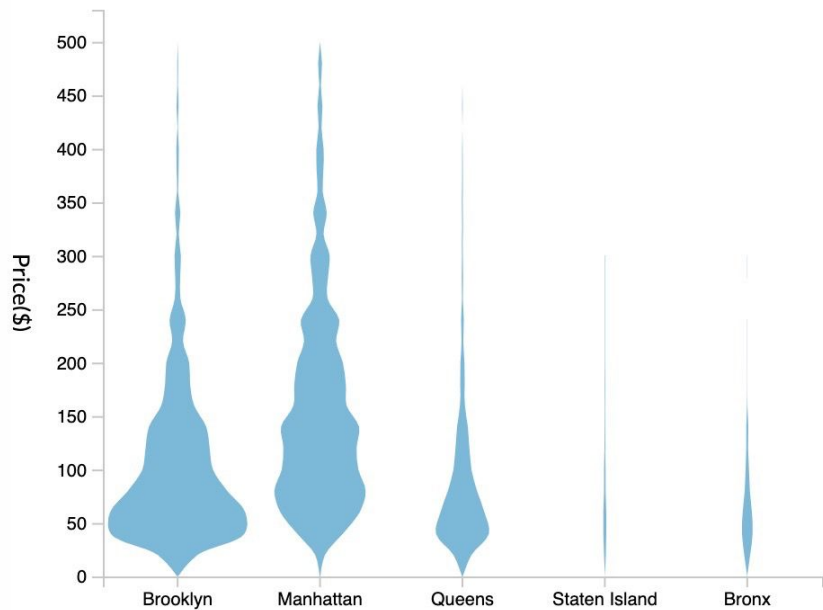

Private Room: 22326 listings

Shared Room: 1160 listings

Price Distribution

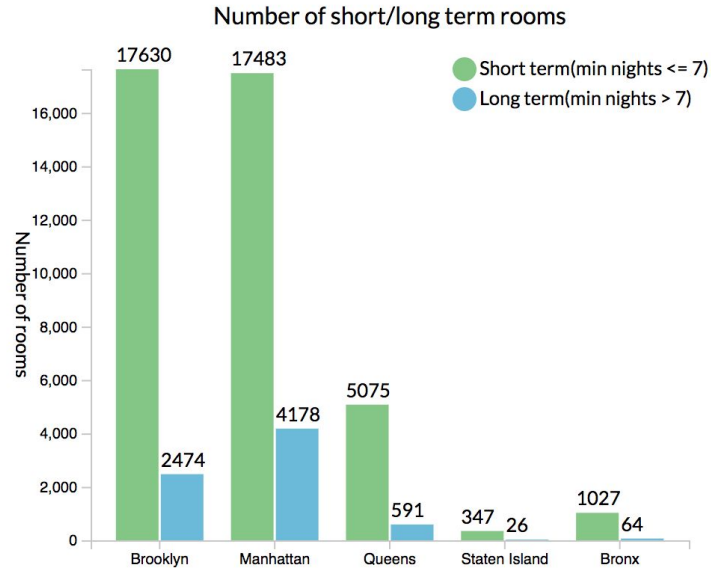

Violin plot of price distribution

Listings of more than \$400/night

Manhattan is pricey!!

Short and long term rooms by Neighbourhood

Neighbourhoods and their availability

Average available days/year

Demo

<https://github.com/imyuanwen/nyc-airbnb>

<https://imyuanwen.github.io/nyc-airbnb/>

- We put our code, data and assets on a Github repository.
- Use Github pages to present our prototype.

Summary of Contribution

- Suchi
- Rui
- Eddie
- Cody

Conclusion & Lesson Learned

- D3 & SimpleStats
- Different visualizations for different data
 - (scatter plot, violin plot, bar chart)
- Usability
